Tell them you are going to the water conference in Kelly.*

**Sponsors: Con Edison, Manhattan University and its
Center for Urban Resilience and Environmental Sustainability (CURES).**

We thank Con Edison for their support of our education and outreach plan.

The Bronx experienced more extreme weather conditions -- be it winter snow and ice storms, or summer heat waves and torrential rain events, than in previous years. It is time to turn to nature and science to improve ecosystem services. One response to the projected increase in 3-day heatwaves with higher than 90 degrees, is to look toward nature for an answer that quickens the removal of carbon that's impacting our atmosphere creating the heat island effect.
